

Wave 2.14 (2022-10-28)

Breaking Changes

Alias readonly in jobfield configuration (11038019)

The alias field in the field configuration has been set to readonly, so it is not possible anymore to change the alias once a field has been created.

Upgrade Steps

New Rights for helptables and picklists

See Ticket: 11029777, Detailed Description will also be added here. Necessary new read rights: "htb-itm" and "pck-itm".

New Features

- SP-11030573: New icon in the job history for additional actions (step independent step changes)
- SP-11030933: In the list of checklists there is a new column which shows which groups have this checklist activated
- SP-11037308: Users will be logged out from the system when the account has been deactivated
- SP-11033097: New webservice to run the logicbuilder
- SP-11030922: Project history will also be updated when a job is assigned
- SP-11038521: Running a logicbuilder script when saving phrase data

Bug Fixes

- SP-11034948: Wrong text wrap on Dashboard Button
- SP-11027209: empty conditions must not be saved or created
- SP-11036275: Properly updating the recent job information when reusing a job
- SP-11038311: Get correct search results when searching for multiple values separated by comma
- SP-11030090: Deleted extra option 'A' from amt type dropdown
- SP-11039387: Searching for images in an imagePicker is now possible
- SP-11034773: Possible data loss when editing a user
- SP-11036623: Links for Jobs in Item Spec tab are now working also if the jobid column is not active
- SP-11034668: Enhanced updating of subjobs when changing connected project values
- SP-11038765: Don't send next position's email when auto stepchange closes the app
- SP-11040376: Project Level Re-Use Button on SGKOP
- SP-11039072: NutriScore Category now saving in the correct language
- SP-11036761: Add history entry when reuse and auto archiving jobs

Performance Improvements
