

Wave 2.16 (11.04.2023)

Breaking Changes

11041839: Removal of old reporting features

With the new WAVE release the old reporting views will not be available anymore. It is only possible to open tableau and pixelboxx. Also the `timing export` buttons from job lists are removed.

New Features

- SP-11025507: Show error when trying to upload a file which is bigger than the max upload size
- SP-11035925: Migration script to import the config files into the database configuration
- SP-11037055: Configurable Timezone for every single mandator
- SP-11040770: The Browser Tab name of the Chili Editor can be configured
- SP-11039567: More options to configure data security files on the login page
- SP-11041839: Removed old reports
- SP-11037753: Disable password login for SSO Users
- SP-11039657: Phrase cleanup Service
- SP-11040371: Ability to delete archived jobs
- SP-11041009: FileList View

Phrase Cleanup Service

This service is responsible for replacing the contentId. But to do so, the following must remember-

- For both (from and to contentId), the 'Category' must be the same.
- For both (from and to contentId), the 'Language' must be the same.

- For both (from and to contentId), the 'Status' must be the same.

A new right has been created. To do so, please create a right "phrase-cleanup".

New User Deactivation Information Service

Wave service notifying users about the upcoming deletion of their accounts. The new service is configurable and run on the days and times defined by the configuration team. This service checks every non-deleted user who has no last login (lastlogin = "0000-00-00 00:00:00") or whose last login is older than X days (a service input parameter) and sends the user a notification mail. A new template must also be created for this purpose. It is a warning to the user that they will be deactivated. If the Wave client allows more than one language (user language settings), an event template must be created for each language. For the configuration is required a template code instead of a template ID. The template code must be the same for all languages!

Full documentation can be found here: <https://fivelab.5flow.net/wave-2/wave-core/-/wikis/resources/services/Email-User-By-Last-Login>

Ability to delete archived jobs

There is now a new right in the system `job-arc-del` and users who're having this right are able to delete archived jobs. The logic here is the same like with active Jobs, webstatus is set to 0 and an entry in the jobs history is being added.

Bug Fixes

- SP-11041442: Improved performance on job archiving
- SP-11038010: Add Revisor for external users
- SP-11040705: Control characters in db-config settings
- SP-11037952: resolving date format issues on system messages
- SP-11036856: Better filter options for project sub lists
- SP-11034052: reuse of deleted picklist domains
- SP-11025851: Properly handle email addresses in the email notification form
- SP-11042785: Fixing an issue with connecting certain helptables to a picklist
- SP-11041758: User dashboard not working with projects
- SP-11040488: Comparison Feature Broken I HubX Max Demo Site

Security Fixes

- SP-11036674: #PT-17 <=> Broken Access Control on stepchanges
- SP-11043040: Removed createclass from devtools

- SP-11043038: Removed SVN functionality

Wave 2.16.1 (03.05.2023)

Bug Fixes

- SP-11041879: Clear search fields when list columns are changed
- SP-11038282: Better right management for usg list

Security Fixes

- SP-11043081: Unvalidated redirect on the caching service
- SP-11036746: User Enumeration on password recover

Wave 2.16.2 (05.05.2023)

Bug Fixes

- SP-11040488: Comparison Feature Broken | HubX Max Demo Site
- SP-11043876: APL Add External Users Link does not work

Wave 2.16.3 (16.05.2023)

Bug Fixes

- SP-11025232: Dalim ES6 Session Management fixes

Wave 2.16.4 (22.05.2023)

Bug Fixes

- SP-11040627: Phrase Content Dashboard, fixes regarding archiving content

Wave 2.16.5 (23.05.2023)

New Features

- SP-11041511: New service to inform users who will be deactivated soon by the deactivation service

Wave 2.16.6 (26.05.2023)

Bug Fixes

- SP-11044552: Removed `Timing Export` Buttons

Wave 2.16.7 (30.05.2023)

Bug Fixes

- SP-11041442 Manual archiving loading time (incl. project archiving incl. history and mails)

Bug Fixes

- SP-11043129: Pentest Q1/2023 | 4.3.57 | Password Reset Token Reuse
- SP-11043037: Pentest Q1/2023 | 4.1.3 | SQL Injections - hom-wel.std
- SP-11043464: Pentest Q1/2023 | 4.2.29 | Broken Access Control tmp folder
- SP-11043103: Pentest Q1/2023 | 4.2.31 | Cross-Site Scripting - job-fil.filelinkupload

Wave 2.16.8 (23.06.2023)

Bug Fixes

- SP-11044213: Bug with soft approvers getting tasks completed if they are on same approval number
- SP-11044846: Phrase save for later should not write N/A in empty categories

Wave 2.16.9 (29.06.2023)

Bug Fixes

- SP-11036523: Send new username sends now the correct username when it was changed

Wave 2.16.10 (30.06.2023)

Bug Fixes

- SP-11044846: Phrase save for later should not write N/A in empty categories
- SP-11044759: Client unable to move task to step 2
- SP-11045183: Project not found from user dashboard

Wave 2.16.11 (11.07.2023)

Bug Fixes

- SP-11045412: Missing Stepchanges when user has group or user rights for those
- SP-11045413: Endless loading when performing automatic Stepchanges

Wave 2.16.12 (12.07.2023)

Bug Fixes

- SP-11039402: Alphabetical order of file upload categories
- SP-11045176: Fixing issues with the add button on the add revisor form
- SP-11045084: Show better info messages when using addrevisor
