

## Wave 2.17 (20.09.2023)

### New Features

---

- SP-11036151: Multiple jobs edit in the list of project items
- SP-11036782: Single Line Edit
- SP-11037753: New Service to remove password for users who should be forced to use sso
- SP-11040075: PHP 8 compability
- SP-11041229: New Icon for custom Tabs in Wave
- SP-11043686: Conditions can have up to 100 items
- SP-11043728: New option in devtools to update multiple language variables at once
- SP-11043731: Separation of User and email when opening Proofscape viewer
- SP-11045786: New language variable for master password login in user history: login-with-master
- SP-11045928: New Chili integration
- SP-11047015: New config options to select the old or new dashboard

#### Single Line Edit

With the new single line edit feature it is possible to edit a job directly from the job list. There is a new right for this (edit: `job.single-edit` ) and in the configuration it can be defined which fields are available in there. When a user selects one line in the job list the single line edit form can be openend. There will be a popup which is similar to the Multi Edit Job Form but the selected job data will be displayed in there and can be changed directly. Cascading Fields will be excluded from this feature since the cascading is not available in here. User Rights will be checked as usual.

Similar to Multi Job Edit there is a new Mainmenu option where the Admins can configure the order of the fields in the Single Line Edit form.

#### New chili integration

With the new integration of chili it is possible to open chili projects from the mainmenu in `wave` without a connected `wave` job needed.

### Breaking Changes

---

#### New rights for system log and mail log (SP: 11044325)

The old right `log` is not in use anymore and it was replaced by "mail-log" and "sys-log". This means that after the update it needs to be checked and configured who should have access to those two areas in wave. The `log` reading right was also used to decide who can see the email log in job histories, that means it needs to be reviewed which users had the read right for `log` and those need also the new `mail-log` right but most users will not need the `sys-log` right.

#### Proofscope Viewer gets user's name and email separately (SP: 11043731)

We have improved the way we're opening the proofscape viewer, now we give the user's name and email in two separated options to the viewer. This means that proofscape can display the user's name while using the email adress only in the background, for example for mapping annotations to a Wave user when sending them to Wave. If this behaviour is not accepted by your customer there is a config variable which can be set to false to get the old behaviour.

#### Insert Right needed to create new flags (SP: 11037729)

If a user needs to be able to add new flags to the system he will now need the insert right for `fla` .

#### New Dashboard configuration options (SP: 11047015)

With Wave 2.17 there are two config variables to activate or deactivate the two dashboards separately.

- `hom-dash` with a default value `TRUE` to have the new dashboard active by default
- `hom-we1` with a default value `FALSE` to have the old dashboard deactivated by default

The variable `hom-we1` will also control where the standard redirect goes to. If it is set to `FALSE` and the variable `redirect` is set to `hom-dash` then the default redirect goes to the new dashboard. If users should be redirected to the old dashboard set `hom-we1` to `TRUE`.

- `redirect` controls where a user should be redirected to. If `hom-wel` is deactivated, it's standard value is `hom-dash`.

## Fields which the alias 'gewicht' (SP: 11045289)

Fields which have `gewicht` as alias will no longer get `g` added as suffix to it's value.

```
$this -> mVal['cloudflow.contactUseFullName'] = false;
//or job type specific
$this -> mVal['job-SRC.cloudflow.contactUseFullName'] = false;
```

## Update Topics

---

### Local Toastr Files

If your Wave System is using the Phrase Nutrition Calculator you should update the external resources from toastr which are loaded in the `nutriscore.htm` template. In there please replace the following two lines.

From:

```
html <script type="text/javascript" src="https://cdnjs.cloudflare.com/ajax/libs/toastr.js/latest/toastr.min.js"></script> <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/toastr.js/latest/toastr.css"></link>
```

To:

```
html <script type="text/javascript" src="js/toastr.js"></script> <link rel="stylesheet" href="htm/default/css/toastr.css"/>
```

## Bug Fixes

---

- SP-11024604: Firstnames, Lastnames or birth years are not allowed in the password
- SP-11036523: Send new username sends now the correct username when it was changed
- SP-11039448: Fix issues with closing flags which have been activated multiple times
- SP-11040904: Wrong mouseover ins job history for statuschanges
- SP-11041084: Remove Jobfields from joblists if a read right has been added
- SP-11041760: Reduced PHP warnings regarding unknown jobfield aliases
- SP-11042442: Check delete right, instead of insert right, to be able to delete global views
- SP-11043036: Create JobField Button now depends on fie insert right
